SMART THERAPY BALL

A Digital system for exercise and performance management.

PLAYBALL is an interactive therapy ball that allows patients to play interactive games while performing a variety of ball exercises, providing visual feedback and tracking the performance and outcomes overtime.

By turning common balls into 'smart' devices without changing the way they are used for therapy, PLAYBALL is currently the most intuitive and easy-to-use technology available for any patient and clinic as well as for home-rehab.

CE Certified medical device
